8.2 Exposure controls

Personal Protective Equipment

Respiratory Protection

Use a properly-fitted, air-purifying, or air-fed respirator complying with an approved standard if a risk assessment indicates this is a necessity. Respirator selection must be on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

Hand Protection

In case of contact through splashing:
Nitrile rubber, glove thickness: > 0.11 mm
Break through time: > 30 min
In case of full contact:

Butyl-rubber, glove thickness: > 0.4mm
Breakthrough time: > 480 min

Eye Protection

Tightly fitting safety goggles should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists, or dusts.

Skin and Body Protection

Appropriate footwear and impervious clothing should be selected based on the task being performed and the risks

Hygiene Measures	involved and should be approved by a specialist before handling this product. Wash hands, forearms, and face thoroughly after handling chemical products, before eating, smoking, using the lavatory, and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure the eyewash station and safety showers are close to the workstation location.
Environmental exposure controls	Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters, or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.

Environmental Exposure Controls

Should not be released in the environment. Prevent product from entering drains.
